

Water Shutoff

Water Shutoff

Grand Alarms Water Shutoff can automatically shut off the main water valve when leaks or floods are detected by flood detectors such as the PowerG Flood or IQ Flood. It pairs with the IQ Panel using Z-Wave Plus and can be manually controlled via the IQ Panel's touchscreen or from the Grand Alarms mobile app.

Works great with Flood Sensors

Primary Features

Affordable

The Grand Alarms Water Shutoff costs significantly less than competing products, saving dealers (and end users) money and reducing the “barrier to entry” for many customers.

Easy Install, no plumber required

Installs on standard quarter turn ball valves in less than 5 minutes. Pairs wirelessly with the IQ Panel and only requires power from a standard outlet. Unlike competitor products the Grand Alarms Water Shutoff does not require a plumber to install, making it the fastest, easiest, and most affordable solution on the market.

Automatic shutoff after leak detection

When a leak is detected the water is shut off instantly, so the only flooding to occur will be from the existing water in the pipes.

Insurance Discounts

Most insurance companies will provide additional discounts when you add this device and its corresponding flood sensors to your home or business.
